WHY DRIPZONE?

Administered in a soothing and calm spa-like atmosphere, IV Therapy is a method of adding vitamins, minerals, and other natural substances directly into a patient's bloodstream. When substances are given orally they must be processed through the stomach and the intestine which decreases the absorption rate by 10%-20%.

Drip therapy delivers nutrients (vitamins, minerals and amino acids) directly to the bloodstream for maximum absorption. While our drip is administered in as little as 45 minutes, you begin to feel the effect instantaneous as we safely deliver larger doses of vitamin nutrients that would not otherwise be tolerated orally.

"SUPER PROFESSIONAL!! SUPER FRIENDLY! FAST SERVICE! BEEN HERE FEW TIMES AND EVERY TIME IT'S BEEN GREAT EXPERIENCE."
